

The Problem

Access to Fractional Investments in Renewable Energy Assets

Limited Access to Renewable Energy Investments

Traditional investment opportunities in renewable energy are often inaccessible to retail investors due to high capital requirements and complex entry barriers.

High Capital Requirements

Significant capital is typically required to participate in renewable energy projects, limiting involvement to larger, wealthier entities.

Liquidity Challenges for Renewable Energy Initiatives

Developing renewable energy projects, particularly in marginalized regions, struggle with liquidity, hindering their progress and impact.

Limited Access to Clean Energy in Marginalized Regions

Marginalized regions often have limited access to clean energy solutions, exacerbating energy inequality and environmental issues.

- Only 2% of global investments in renewable energy in the last two decades were made in Africa, with significant regional disparities..
- In Sub-Saharan Africa, electrification rate was static at 46% in 2019 with 906 million people still lacking access to clean cooking fuels and technologies.
